

Rising Waters Project - Flood Prediction Dataset

Dataset Name: Flood Prediction Dataset

Format: CSV / XLSX

Purpose: Used to train and test a machine learning model for flood prediction in the Rising Waters project.

Dataset Features

Feature	Type	Description
Temperature	Float	Temperature (°C)
Humidity	Integer	Humidity (%)
Rainfall	Float	Rainfall (mm)
Water_Level	Float	River water level (m)
River_Flow	Float	River flow rate (m ³ /s)
Cloud_Cover	Integer	Cloud cover (%)
Wind_Speed	Float	Wind speed (km/h)
Pressure	Float	Atmospheric pressure (hPa)
Soil_Moisture	Integer	Soil moisture (%)
Flood	Binary	0 = No Flood, 1 = Flood

Sample Records

Temperature	Humidity	Rainfall	Water_Level	River_Flow	Cloud_Cover	Wind_Speed	Pressure	Soil_Moisture	Flood
29	82	215	5.8	320	88	18	1004	78	1
31	68	35	2.1	95	42	10	1015	40	0
27	90	280	6.7	385	96	22	999	88	1
30	72	60	2.9	120	55	12	1012	48	0
26	94	340	7.3	430	98	25	996	92	1

1000-Row Implementation Dataset

This project can use a dataset containing approximately 1000 records. Each record should include the features listed above. The target column 'Flood' indicates whether flood conditions are present (1) or absent (0). The dataset can be used for preprocessing, training, testing, and evaluating machine learning models.
